

## DRAIN CLEANING

Keeping your drain free of debris and providing unobstructed water flow is mandatory. Having the right tool for the job can make maintaining a properly functioning shower drain much easier.

- 1 Remove stopper and insert the Clean-It® Drain-Cleaning Tool into the drain.

- 2 Insert the tool and twist, making sure the teeth grab any material in the drain.

- 3 Use proper safety equipment, like gloves and safety glasses.

### PRO TIP

Have fresh gloves handy, and provide all housekeepers and maintenance staff with a drain cleaning tool so they can proactively address slow-flowing drains.
